

All your agents, in one place.

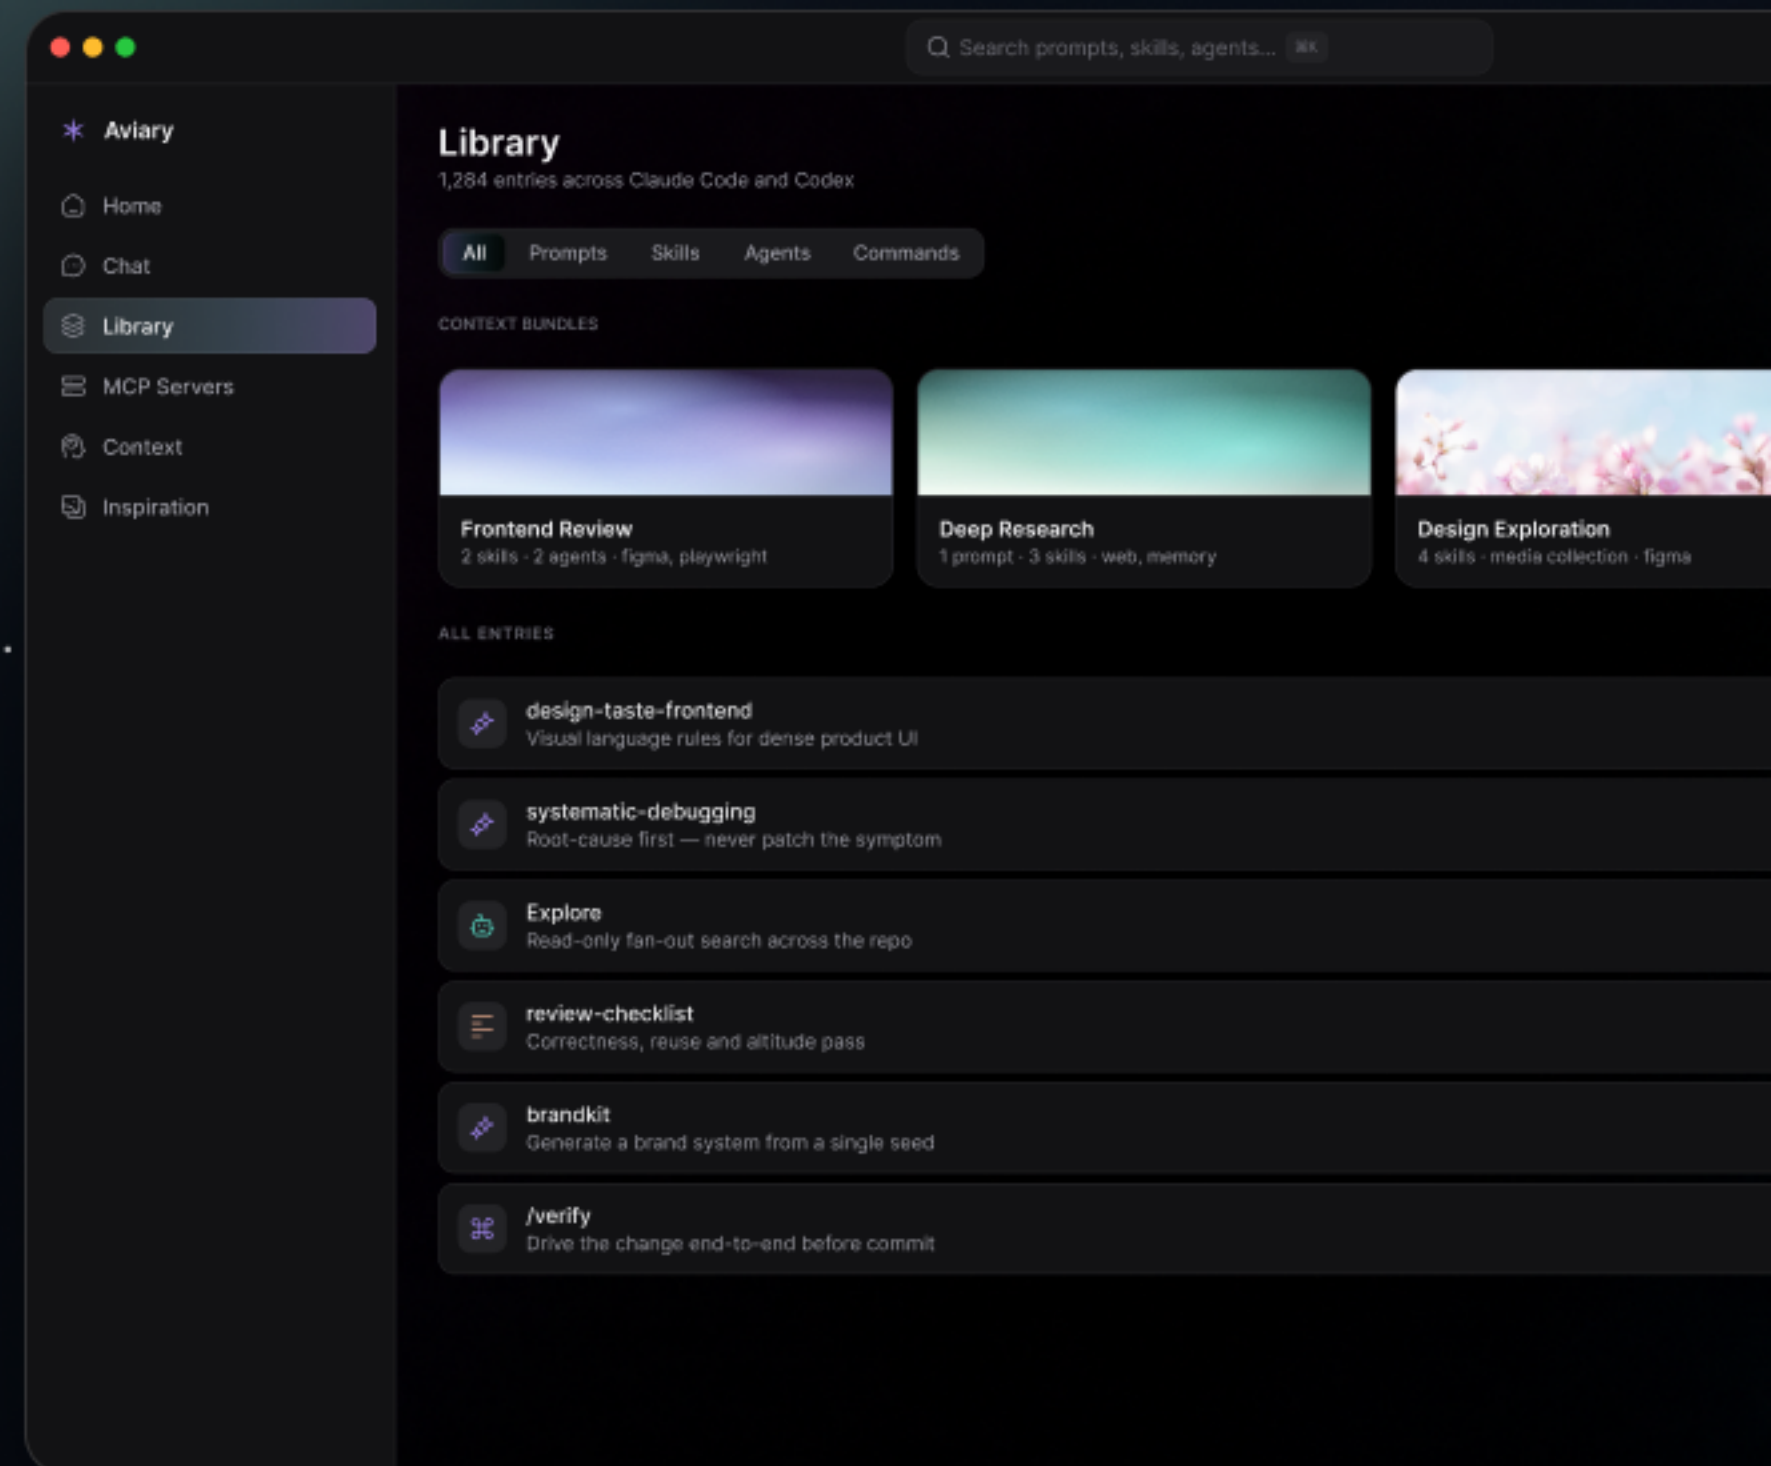

Claude Code, Codex, and whatever comes next — one window for the prompts, skills, servers and memory they all read from.

Every skill, one library.

Grouped by pack, deduped across runners. A skill
symlinked into both shows up once, reporting both.

16,900 tokens before you type.

See exactly what loads, in resolution order, with its
real cost against the window.
